AI-Native Software Engineering Intern

Job Title: Intern + Full-Time Employee

Onboarding Location: Hyderabad, Coimbatore, and Chennai *(Candidates must be flexible to any EPAM office location)*

ABOUT US

With over 12,000 professionals, EPAM India is the largest delivery hub globally and a strategic partner for enterprises leading at the intersection of engineering excellence and AI-native innovation — accelerating time-to-market, strengthening execution quality, and enabling clients to stay ahead in their domains. Having collaborated with more than 50 GCCs, EPAM India is now an epicenter of expertise in AI, advanced engineering, data architecture, and modernization services.

JOB SUMMARY

A mandatory self-study learning path must be completed before joining as an intern.

You will begin your professional journey as an Intern, undergoing a comprehensive 5-month training program. Upon successful completion of the internship, you will transition into a full-time role as an Employee.

As an Engineer, you will be responsible for developing high-quality software solutions, participating in all phases of the software development lifecycle, and supporting other team members in achieving project goals. The ideal candidate will have a strong background in software engineering and the ability to work independently and collaboratively to deliver results.

ABOUT THE PROGRAM

EPAM is building the next generation of engineers who don't just use AI tools — they think, design, and ship software with AI as a core part of their workflow, not an add-on. This internship is a structured, cohort-based program designed to take capable engineering graduates and turn them into AI-Native Junior Engineers: professionals fluent in agentic development practices, prompt and context engineering, tool/MCP design, and structural (not just instructional) approaches to quality and governance.

This is not a “use Copilot to autocomplete code” program. Interns will learn to architect, delegate to, supervise, and validate AI agents as part of real delivery work — while building the classical engineering fundamentals that make that judgment possible in the first place.

WHAT WE'RE LOOKING FOR

- Solid fundamentals in at least one programming language (Java, Python, JavaScript/TypeScript, or C#) and a basic understanding of OOP and data structures
- Genuine curiosity about how AI agents work — not just as a user of ChatGPT/Copilot, but interest in why they behave the way they do

- Strong first-principles thinking — comfortable saying "I don't understand why this works" and digging until you do, rather than accepting a plausible-sounding answer
- Basic familiarity with Git and command-line tools
- Willingness to unlearn "just prompt it until it works" habits in favor of structured, verifiable engineering practice
- Good written communication — much of AI-native work is writing specs and reviewing agent output, not just writing code

NICE TO HAVE

- Exposure to any LLM API (OpenAI, Anthropic, etc.) through coursework or personal projects
- Familiarity with basic prompt engineering concepts
- A GitHub profile with personal projects, even small ones

COMPENSATION & BENEFITS

Salary: Internship — INR 27,500/month | Full-Time — INR 8.48 LPA

- Customizable insurance coverage
- Professional development opportunities
- Paid leave for maternity, paternity & bereavement
- Retirement benefits (VPF, NPS)
- Hobby Clubs
- Company Social Events
