Education

Lakshmi Narain College of Technology — Bhopal, India
Bachelor of Technology in Computer Science (IoT Specialization) — *Jan 2023 – Jul 2027*

- Relevant Coursework: Data Structures, Algorithms, IoT Systems, Cloud Computing, AI/ML

Experience

Full Stack Engineer — Mar 2024 – Jul 2024
JollySano (Freelance) — *Remote, United States*

- Architected and deployed scalable full-stack health management platform serving multiple users with real-time data synchronization
- Developed RESTful APIs using Node.js and Express, integrated with MongoDB for efficient data persistence and retrieval
- Implemented responsive frontend using React and TypeScript, improving user engagement by enhancing UX/UI workflows
- Integrated Stripe payment processing system, ensuring secure transactions and PCI compliance

Backend Developer — May 2024 – May 2024
Reflowable (Freelance) — *Remote*

- Engineered comprehensive task management application backend handling user authentication, CRUD operations, and data validation
- Designed and implemented RESTful API endpoints with optimized database queries, reducing response time by 40%
- Built scalable microservices architecture to support team collaboration features and real-time updates
- Deployed application using modern DevOps practices with CI/CD pipelines for automated testing and deployment

AI and Data Analytics Intern — Jul 2025 – Aug 2025
Edunet Foundation & IBM SkillsBuild — *India*

- Completed intensive training in AI/ML concepts, including neural networks, NLP, and data analytics using IBM Cloud services
- Developed and deployed machine learning models for predictive analytics with Python, TensorFlow, and scikit-learn
- Gained hands-on experience with IBM Watson AI services and cloud-based data processing pipelines

Projects

AI Voice Assistant (Jarvis) – Built conversational AI assistant using Google Gemini API with natural language processing capabilities, voice recognition, and contextual response generation

Health Management Platform – Developed end-to-end HIPAA-compliant health tracking system with user authentication, data visualization, and secure payment integration using MERN stack

Task Management System – Created collaborative task management tool with real-time synchronization, role-based access control, and notification system using Node.js and WebSocket

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C++, SQL, HTML/CSS
Frameworks & Libraries: React, Node.js, Express.js, Next.js, TensorFlow, scikit-learn
Technologies: MongoDB, PostgreSQL, REST APIs, Git, Docker, AWS, IBM Cloud, Stripe API
Specializations: Full Stack Development, Backend Architecture, Generative AI, Data Structures & Algorithms, IoT Systems, Microservices, Cloud Computing

Certifications

Introduction to Generative AI – Google Cloud
Build Jarvis Via Gemini – Project-based AI Development
Bloomberg Client Service Job Simulation – Accenture
Foundations of AI – Edunet Foundation & IBM
