Education

IIT Madras (Indian Institute of Technology Madras), Chennai, Tamilnadu
Bachelor of Science in Data Science *2024 - 2027*

Lakshmi Narain College Of Technology, Bhopal, Madhya Pradesh
Bachelor Of Technology In Artificial Intelligence and Data Science | 8.62 CGPA *August 2023 – August 2027*

Work Experience

MANIT Bhopal **June 2025 – July 2025**
AI/ML Intern *Bhopal, Madhya Pradesh, India*

- Developed and trained machine learning classification models using Python, improving prediction performance through data preparation and model optimization.
- Prepared and processed datasets by handling missing values, cleaning data, and selecting relevant features to improve model quality and reliability.
- Evaluated model performance, analyzed prediction results, and documented key insights to support accurate and reliable decision-making.

Technical Skills

Languages: Python(For ML), Java
Frameworks/Technologies: LangGraph, LangChain
Developer Tools: Jupyter Notebook, Google Colab

Projects

AI Travel Planner – Multi-Agent Trip Planning System **Jan 2025 – Mar 2025**

- *Tech Stack: Python, LangGraph, LLM Orchestration, Streamlit, Pydantic, Playwright*
- Designed and deployed a **6-node multi-agent LLM pipeline** using **LangGraph** to automate end-to-end trip planning (flights, hotels, itinerary, PDF report) from a single natural-language query.
- Engineered **structured output extraction** with Pydantic schemas to convert free-text queries into typed API parameters, achieving reliable, schema-validated routing through the **AviationStack** flight-data API and **Tavily** real-time search for grounded, up-to-date results.
- Automated **document generation** with a Playwright-driven HTML-to-PDF pipeline, converting LLM-authored content into styled, shareable PDF travel reports without manual formatting.

Agentic AI Chatbot – Tool-Calling Assistant with Memory **Mar 2025 – May 2025**

- *Tech Stack: Python, LangGraph, LLM Tool Use, Streamlit*
- Built a **ReAct-style agentic chatbot** using **LangGraph**'s conditional-edge architecture, enabling the LLM to autonomously decide between direct response and tool invocation (web search, calculator, datetime) at inference time.
- Reduced hallucinated and outdated responses by grounding answers in **live web search results** via DuckDuckGo API integration, improving factual accuracy for time-sensitive queries.
- Deployed a low-latency **Streamlit chat interface** with token-level response streaming and live tool-execution status indicators, reducing perceived response latency and improving user-facing transparency.

Achievements

- Top 15 All-India Finalist at YI BBIC 2.0 for Deep Tech innovation at IIT Madras.
- Two-time winner of Smart India Hackathon internal rounds, leading teams to build software solutions under competitive evaluation.
- Solved 500+ Data Structures and Algorithms problems, demonstrating strong problem-solving and algorithmic skills.
