EDUCATION

Lakshmi Narain College of Technology *Bhopal, MP*
Bachelor of Technology - Computer Science and Engineering; GPA: 7.68 *Sept 2023 - June 2027*

PROJECTS

Real Time Chat Application | Link | Github *June 2025 - July 2025*

- Developed a **full-stack real-time chat application** using the **MERN stack** with **Socket.io** for instant messaging capabilities and live user status updates.
- Implemented **secure authentication and authorization** using **JWT tokens**, ensuring protected routes and user data privacy with comprehensive error handling on both client and server sides.
- Built a **responsive and modern UI** using **TailwindCSS and DaisyUI**, integrated **Zustand for global state management**, and deployed the application on render **zero-cost hosting solutions**.

Aim Trainer | Python, Pygame | *Oct 2025 - Nov 2025*

- Developed an **interactive Aim Trainer game** using **Python and Pygame**, featuring dynamic target generation with **smooth animations** and collision detection algorithms to enhance user reflexes and precision.
- Implemented **real-time performance tracking system** displaying metrics including accuracy percentage, hits per second, elapsed time, and remaining lives, providing instant feedback to improve user gameplay experience.
- Designed **game mechanics** with progressively shrinking targets using mathematical calculations for **collision detection**, and created an end-game statistics screen showing comprehensive performance analytics including **speed and accuracy metrics**.

TECHNICAL SKILLS

Programming Languages: Html, Css, JavaScript, C++, Python, Java

Databases: PostgreSQL, MySQL

Frameworks / Libraries: React, Spring Boot

Tools/Technologies: Git, Github, VS Code, IntelliJ,

Core Concepts: Data Structures and Algorithms, OOP, Operating Systems, DBMS, Computer Networks

CERTIFICATES / ACHIEVEMENTS

Database management system

- Successfully completed Database Management System – Part 1 & 2 from Infosys Springboard. Gained strong understanding of advanced DBMS concepts including normalization and indexing. Learned transaction management concepts such as ACID properties and concurrency control. Studied database recovery techniques and crash recovery mechanisms. Improved hands-on skills in SQL queries and database design principles.

JavaScript Essentials 1(Cisco)

- Gained proficiency in core JavaScript concepts — including syntax, variables, operators, flow control, functions, and data types — and developed the ability to analyze problems algorithmically and build simple JavaScript programs

Data structure and backend with java

- Completed Data Structures & Backend with Java by Board Infinity (Coursera). Strong understanding of core data structures, algorithms, and problem-solving techniques. Hands-on experience with Java backend concepts and efficient coding practices.

500+ problems solved on various coding platforms including LeetCode, HackerRank, and GFG.
