## Professional Summary

Full-Stack Software Engineer (B.Tech CSE AI/ML, 2027) building scalable systems across REST APIs and web applications using Core Java, React, PostgreSQL, and Docker. Google Developer Group Grand Finalist — Top 25/1,500 teams. 250+ DSA problems.

## Education

**Bachelor of Technology, Computer Science & Engineering (AI & ML)** Exp. 2027
Lakshmi Narain College of Technology, Bhopal, MP *7.5 CGPA*

**Diploma(Polytechnic) in Computer Science & Engineering** 2023
Samrat Ashok Technological Institute, Vidisha, MP *7.2 CGPA*

## Experience

**Software Engineering Intern** Jun 2026 - Present
*GiftCred*

- Built a full-stack gift card platform using React and PostgreSQL with REST APIs integration, serving 300+ products with real-time checkout
- Automated 20-case API test coverage across 6 product types, cutting QA time by 4 hours; containerized backend via Docker for production deployment

**Open Source Contributor — DREAMS** Dec 2025 – Jan 2026
*University of Alaska*

- Designed and merged a GitHub Actions CI/CD pipeline automating Phase-1 data integrity validation for a geoscience research workflow; cut manual QA time by 60% and ensured 100% reproducibility across all commits.
- Authored unit tests across 4 validation stages; resolved pre-existing pipeline failures via code review feedback, improving reliability for the research team.

## Projects

**DevTrack – Sprint & Task Management Platform System** [Live Link] | [GitHub Link]
*Tech Stack: Java, Spring Boot, Spring Data JPA, React, PostgreSQL, JWT, Docker, Hibernate.*

- Developed a full-stack Kanban task tracker with a React frontend and Spring Boot REST API backend, implementing core CRUD operations via Spring Data JPA and PostgreSQL, and containerizing the application using Docker Compose.

**VisionAI – Hybrid Road Safety & Driver Assistance Platform** [Live Link] | [GitHub Link]
*Tech Stack: Next.js, React, TypeScript, PostgreSQL, REST APIs, Git*

- Production SaaS application built with React, TypeScript, and PostgreSQL; implemented multi-tenant data architecture with role-based access control, REST API integration, and real-time alert delivery system.

**Cache Coherence Monitoring System** [Github Link]
*Tech Stack: Python, React.js, Redis, PostgreSQL, AWS, Docker.*

- Built a monitoring system with React frontend, FastAPI REST APIs, Redis for caching, and PostgreSQL for storage; deployed on AWS Lambda with Docker containerization and 100% test coverage via automated test suite

## Technical Skills

**Languages:** Java, JavaScript, TypeScript, Python, C

**Frameworks:** Spring Boot 3, Spring Data JPA, React.js, REST APIs, Hibernate

**Database:** PostgreSQL, Redis

**Cloud & DevOps:** AWS (Lambda, S3, EC2), CI/CD, Docker.

**CS Core:** Data Structures & Algorithms , OOP, OS, Computer Networks, Multi-threading.

## Achievements

- **Grand Finalist** – Google Developer Group GGC Techsprint 2025 – **Top 25 among 1500 Teams.**
- **Semi Finalist -** Economic Times AI Hackathon (National-Level).

## Leadership

**Team Lead — Team Variable-X** 2025 – Present
Led cross-functional teams across 3 major hackathons, earning Top 25/1,500+, National Semi-Finalist recognition.

## Certifications

- **Oracle Certified**: OCI Generative AI Data Science Professional– Oracle
