SUMMARY

Computer Science Engineering student with hands-on experience in Java, Python, React.js, and REST API integration. Built practical software projects spanning **AI-driven anomaly detection, data analysis, and emergency-response applications**. Familiar with Rest APIs, Pandas, NumPy, SQL, spring, spring boot and Git, with a strong interest in backend development, problem-solving, and building real-world software solutions.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, Kotlin, SQL, React.js
Frontend: React.js, HTML5, CSS, Tailwind CSS, jetpack Compose
Java & Backend: Core Java, OOP, Spring Boot (Learning), REST APIs, Node.js
Database: SQL, MySQL
Python & Data: Pandas, NumPy, REST APIs, JSON, data cleaning
AI/ML: Model integration
Tools & Practices: Git, GitHub, VS Code, IntelliJ IDEA, MySQL Workbench, Jupyter Notebook, Linux, Android Studio

EXPERIENCE

Smart India Hackathon 2026 **2026**

- Contributed to the React frontend of an AI-driven component burn-in screening project, developing dashboard and component monitoring interfaces.
- Worked on component tables, summary views, and charts to display anomaly detection and prediction results.
- Prepared frontend components for integration with the FastAPI backend.

Project Development & Exhibition **2026**

- Contributed to an offline-first road emergency assistance application using Kotlin and Jetpack Compose.
- Represented RoadSOS at Bhopal Vigyan Mela 2026 and received a certificate for the project's participation.

PROJECTS

DriftGuard — AI-Driven Component Burn-In Screening | Tech: *React, Python, FastAPI, Pandas, NumPy, scikit-learn, REST API*
Live Demo: driftguard.app | **Repository:** GitHub Repository

- Developed React dashboard interfaces to display component screening results, anomaly flags, and prediction outputs.
- Contributed to ML-based anomaly detection and drift prediction using statistical methods and scikit-learn.
- Worked on integrating the React frontend with the FastAPI backend, including API response handling and CORS troubleshooting.

Live Currency Converter | Tech: *React, JavaScript, REST API, CSS* **Live Demo:** currency.web | **Repository:** itemize

Developed a React application to convert currencies using exchange-rate data retrieved from an API.

Built reusable UI components and handled user input and API responses to display currency conversion results.

RoadSOS — Offline Road Emergency Assistance Application | Tech: *Kotlin, Jetpack Compose, TensorFlow Lite, SQLite, Android*
Repository: GitHub Repository

- Served as app lead, contributing to application development and user interface implementation using Kotlin and Jetpack Compose.
- Worked on offline emergency assistance features, local emergency-service information, and SOS functionality.
- Contributed to application testing and debugging to improve functionality and reliability.
- Represented RoadSOS at Bhopal Vigyan Mela 2026 and received a certificate for participation.

ACHIEVEMENTS

- Future Yi 6.0 National Round — **1st Runner-Up (2026)**, Team Secretos; served as Team Leader for the RoadSOS road-safety solution.
- Future Yi 6.0 Bhopal Chapter — **1st Place** in the Yi Road Safety category (24 Aug 2026), serving as Team Leader.
- Smart India Hackathon 2026 — contributed to DriftGuard (Problem Statement 26170) as a frontend developer and ML contributor.
- Represented RoadSOS at Bhopal Vigyan Mela 2026 and received a certificate for participation.

EDUCATION

B.Tech in Computer Science Engineering — LNCT Group of Colleges 2024–2028 | CGPA: 8.04

CERTIFICATIONS

- Introduction to OpenAI GPT Models — Infosys Springboard (Oct 2026)
- TATA Cyber Security Analyst — Certificate
- Fundamentals of Information Security — Infosys Springboard (Oct 2026)
